

VECTOR MINIMIZATION WORKSHOP

Adopting a proactive approach to minimizing vectors is cost effective and reduces the risk to public health

The Orange County Vector Control District is offering a technical workshop which addresses planning, design, and maintenance considerations related to vector production potential in new and existing developments. Vector minimization principles associated with structural stormwater BMPs, constructed wetlands, water management, and landscape design are emphasized.

Who Should Attend?

- Engineers (Public and Private)
- NPDES Coordinators
- Planning Consultants
- Environmental Consultants
- Developers
- Municipal Staff
 - ◆ Planning and Permitting
 - ◆ Code Enforcement
 - ◆ Public Works
 - ◆ Maintenance and Operations

Workshop Topics:

- Vector Education
- Principles of Vector Minimization for:
 - ◆ Stormwater BMP's
 - ◆ Water Quality Treatment Wetlands
 - ◆ Habitat Mitigation Sites
 - ◆ Other land uses
- Additional Information and Guidance Resources

Learn How to Reduce Mosquito Breeding and Vector Production Potential through:

- Planning Considerations
- Design Elements
- Maintenance Functions

Advantages Include:

- Increased Protection of Public Health and Safety
- Information Sharing and Reporting
- Decrease Liability and Cost Savings

**WORKSHOP DURATION FLEXIBLE TO ACCOMMODATE SCHEDULING
